Continuation of Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments:

Ms. Rowan noted, and examiner agreed, that given the effective filing date of Ashida et al., the reference is not suitable for use against the present claims for the following reason. The effective filing date of Ashida et al. falls between the filing date and the priority date of the present application. However, the present application claims priority to a document filed in the United Kingdom and a certified copy of this document has been filed in the present application. Thus, applicants have perfected the foreign priority filing date. Therefore, Ashida et al. is not suitable for use as prior art under any subsection of 35 USC 102.

Further, Ms. Rowan proposed amending the claims to recite that the image is "substantially retained within the upper protective layer" in order to overcome the remaining rejections of record. Ms. Rowan noted that support for such amendment is found in example 3 of the present specification. Ms. Rowan also argued that EP 858905, Higuma et al., and Shibahara et al. all retain the image in the lower layer not the upper layer of the recording medium as presently claimed. Ms. Rowan stated that there is explicit disclosures in each of EP 858905, Higuma et al., and Shibahara et al. that the image is not retained in the upper protective layer as presently claimed. Examiner noted that if such explicit disclosure is not found in each of the references, a declaration would be necessary to show that the retention of the image in the upper protective layer is not an inherent characteristic of the references as set forth by the examiner in paragraph 11 of the office action mailed 7/19/02, Paper No. 12. Such declaration would be necessary in order to provide clear and convincing evidence of applicants' position that the references do not retain the image in the upper protective layer. With regards to Bodager et al., Ms. Rowan noted that this reference not only may not retain the image in the upper protective layer of the recording medium, but also stated that the reference does not disclose the presently claimed invention.
